

Vendée Globe – Powered by Super B

The Vendée Globe is still the only non-stop solo round the world race without assistance.

The Vendée Globe boats all measure 18.28 m (60 foot) with a draught of 4.50 m (14.75 feet). Carrying a lot of sail, they are the most powerful monohulls in the world skippered by a solo sailor.

Ambre Eppler Senior Sales Manager – 5 years into Super B

“ With my 15 years international business development and account maintenance experience, I find into Super B, a great pioneering engineering company. We bring into the market not only one of the most advanced lithium batteries but also a great support to each of our clients, finding the best dedicated solution to each of the project we are involved in. The last 5 years at Super B have been a real exciting challenge with many new markets opportunities to develop in a multicultural environment. “

About project Vendee Globe:

“With a strong background in Motorsport, when Conrad Colman first contacted me in February 2016, it was clear that Super B wanted to be part of this incredible challenge helping him to participate to the Vendée Globe. Thanks to electric engine from Oceanvolt and Super B lithium batteries, Conrad will be the first skipper to race around the world without fossil fuels. The Galileo will be back on sea this week, heading for the USA soon. Follow-up this great exploit on Super B website! “
